Hungarian plastic injection moulding company offers tile levelling systems and seeks distributors

The company is a Hungarian, family-owned manufacturer active in the plastics industry since 2002. Its core activity is plastic injection moulding, producing both self-developed products and plastic components based on customer specifications. The company operates with injection moulding machines with capacities ranging from 25t to 200t and has long-term experience in stable production processes. The main product focus for international cooperation is tile levelling systems for the construction and tiling sector. The product range includes tile leveller

sets in 1–3 mm sizes, XL tile leveller sets in 1–3 mm sizes, and threaded tile leveller solutions in 1–3 mm sizes. These products are designed to support accurate tile installation and consistent spacing in professional and large-scale construction works. The company seeks wholesalers, distributors, construction material retailers and large-scale professional users active in the tiling and construction supply sector.

Denmark-based industrial supplier seeks EU manufacturers of lubrication and fluid-handling equipment

A Denmark-based industrial supplier requests EU-based manufacturers/suppliers of pumps, grease and oil dispensing equipment, lubrication heads and complementary fluid-handling products. Cooperation is envisaged via supplier and commercial agreements, including neutral or private-label production. The company is interested in a long-term supplier relationship that combines stable serial supply with an option to introduce new or improved items over time. New products should be possible to evaluate through samples and/or pilot deliveries before scaling. The company values a partner that can discuss design-for-manufacturing, materials and tolerances in a pragmatic way and that can support a smooth ramp-up with flexible minimum order quantities at the start of cooperation (minimum order quantity requirements are important and may differ depending on item size).

Greek premium cold-extracted Extra Virgin Olive Oil (EVOO) brand seeks international distribution partners under commercial distribution agreements

The Greek company is a premium EVOO brand rooted in the olive-growing heritage of Ancient Olympia and strategically positioned as a strong export-oriented European brand. The EVOO is produced through cold extraction, ensuring high quality and the preservation of its natural characteristics. Production follows strict quality control standards and sustainable agricultural practices. The company has established an active commercial presence in Germany, supported by structured digital positioning, full tax compliance, and organized supply chain management. As part of its long-term growth strategy, the company aims to strengthen production capacity and expand its portfolio, including the future development of certified organic products. The Greek company seeks national or regional premium food distributors, EVOO importers, high-end retail chains, gourmet and delicatessen networks, HoReCa suppliers, and strategic market development partners. The preferred cooperation model is a commercial distribution agreement, either exclusive or non-exclusive, depending on the market structure.

Italian bakery seeks an innovative and eco-friendly packaging solution for long shelf-life artisanal bread

Small artisanal bakery based in Calabria (Italy), active since 1969, is seeking technology partners to develop a sustainable, resistant, food-contact packaging solution for fragile artisanal bread with a shelf life of up to 6 months without preservatives.

They aim to develop a new packaging solution, improving upon the current packaging. The goal is to design a package that allows the reduction of the current format from 300 g to approximately 100 g, while introducing greater environmental sustainability, improved protection for the fragile product, and enhanced visual presentation.

Partner sought for the development of an ultra-high-density EEG system for babies

A French institute aims to develop a high-density electroencephalography cap equipped with 280 dry electrodes, compatible with the BEL/EGI EEG recording system. The design must allow rapid installation, ensure high comfort for young infants, and deliver a high signal-to-noise ratio. They look for partners with expertise in the design and fabrication of ultra-high-density EEG electrodes and caps for scalp recordings, including advanced dry-electrode materials inspired by intracranial technologies (e.g. conductive polymers, nano-textured surfaces).
