Bioactive lipid ingredients from renewable side-streams for cosmetic formulations

The Estonian company develops sustainable lipids produced through microbial fermentation using renewable side-streams from agriculture, food industry, and forestry as feedstock. By converting these underutilised resources into oils and fats, the SME aims to reduce dependency on conventional oils produced through large-scale agriculture and animal farming. The company seeks international partners interested in evaluating and integrating fermentation-derived lipids into cosmetic formulations through technical validation, application development, and commercial collaboration.
